

Software Engineer (.NET)

Who we are

Zühlke is a service provider for innovation projects. We develop financially successful products, services and business models for today's digital world – from coming up with the initial idea through to the implementation and operation. We can achieve this by drawing on the experience of over 800 in-house experts and of more than 8.000 successful projects.

Zühlke Serbia is an attractive employer that offers challenging career opportunities for skilled, highly motivated software engineers. Within the Zühlke Group, we position ourselves as a center of expertise for distributed, agile software development. Together with colleagues in Switzerland, Germany, the UK and Austria we work on challenging software projects involving the latest technologies and variety of known practices.

We are currently looking for highly motivated Software Engineers (.NET) to join our Belgrade office.

Our offering

- ability to work with most technically gifted people in our industry
- training package (dedicated working days - approx. 5 % of your time and a matching financial budget)
- clear career path and defined personal goals with achievement based career prospects
- permanent contract with competitive salary
- opportunity to collaborate with colleagues and clients across the Zühlke Group

Your skills

You should have a technical related degree and/or equivalent professional qualification, communicative and open-minded personality and be fluent in English (both written and spoken).

As for technical experience, we require knowledge in the following areas:

- understanding of OOP concepts, UML, design patterns and architectural concepts
- fluency in C# and knowledge of .NET Framework, databases and Web development
- understanding concepts of agile methodologies
- desire to develop your skills even further in different areas of software engineering
- knowledge of NoSQL and cloud platforms (especially Azure) is a plus

Responsibilities

- show analytical, yet innovative mindset and the desire to challenge conventional thinking
- collaborate closely with colleagues in creating modern web, mobile or desktop applications
- show analytical and methodical approach for solving complex problems
- apply Scrum and agile practices in your daily work
- create quality solutions through application of good coding and testing practices
