

# Test Automation Engineer

## Who we are

Zühlke is a service provider for innovation projects. We develop financially successful products, services and business models for today's digital world – from coming up with the initial idea through to the implementation and operation. We can achieve this by drawing on the experience of over 800 in-house experts and of more than 8.000 successful projects.

Zühlke Serbia is an attractive employer that offers challenging career opportunities for skilled, highly motivated software engineers. Within the Zühlke Group, we position ourselves as a center of expertise for distributed, agile software development. Together with colleagues in Switzerland, Germany, the UK and Austria, we work on challenging software projects involving the latest technologies and variety of known practices.

We are currently looking for highly motivated Test Automation Engineers to join our Belgrade office.

## Our offering

- ability to work with most technically gifted people in our industry
- training package (dedicated working days - approx. 5 % of your time and a matching financial budget)
- clear career path and defined personal goals with achievement based career prospects
- permanent contract with competitive salary
- opportunity to collaborate with colleagues and clients across the Zühlke Group

## Your skills

You should have a technical related degree and/or equivalent professional qualification, communicative and open-minded personality and be fluent in English (both written and spoken).

As for technical experience, we require knowledge in the following areas:

- understanding of OOP concepts and experience with at least one OOP language
- experience in testing web and mobile applications, and web services/APIs
- knowledge or experience in non-functional testing (e.g. performance, stress, security) is considered as a plus
- knowledge of software testing process, methods, levels and types
- understanding agile software development methodologies and feel comfortable working in agile environment
- knowledge of agile testing practices and continuous integration/delivery approach
- experience in manual testing, including test planning, creation, execution, and results and defect reporting
- experience test management and/or requirements engineering is considered as a plus

## Responsibilities

- show analytical and curious, yet innovative mind-set and the desire to challenge conventional thinking
- as a member of Scrum development team collaborate closely with colleagues, business owners and quality managers in creating modern web, mobile or desktop applications

- design, implement and execute automated tests (API, integration and UI) in order to test functional requirements
- design and implement tools for non-functional testing, e.g. performance, stress, security, etc.
- prepare and execute test plans, analyze results, identify and report issues using the issue tracking system
- design, develop and maintain test frameworks, testing tools and utilities
- participate in requirements analysis and its verification with customers
