PROJECTS

Organico FullStack

The previous version of the application with now added PHP and MySQL. Includes dynamic content loading, Admin Panel, Image Manipulation and working with files.

gitSearch

Angular app using the GitHub API to display and save user and repo info. Firebase on the server with the angularFire2 library.

Filmster

App I'm currently working on. Angular with TMDB API, and firebase to display, filter rate and comment movies.

Documentation and code from my projects are available on my GitHub profile
